SPECIAL PROJECTS

If standard means of transport cannot be used for transport we present our clients with individual solutions.

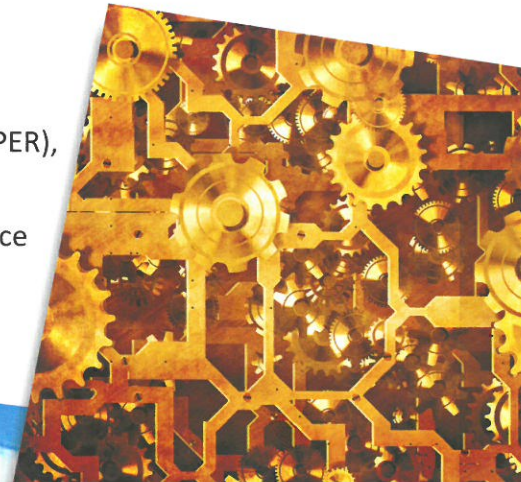

Transport and safety of such cargo requires choosing contracting parties carefully.

Each stage of transport is decisive. Flexibility of actions and swiftness of decisions are the key to success. Having the above in mind, we offer specialist door to door shipping and transport service which comprises:

- using specialist equipment suitable for the cargo during ocean freight – flat racks, break bulk cargo
- organizing transshipments and storage in seaports and airport terminals
- help with acquiring adequate licences, organizing convoys and planning the transport route of oversized cargo
- using specialised road transport comprising extendable trailers, low-chassis trailers, high-tonnage trailers
- organizing transport of dangerous goods (DGR/IMO), perishable cargo (PER), valuable shipments (VAL) and radioactive materials (RRR)
- organising documentation as well as import and export customs clearance
- air and sea charter rental
- ongoing consulting services when organizing a project

Our experience in specialist transport of such non-standard goods as machines, vehicles or production lines makes us believe that there are no limits for us.

It does not matter how heavy or big the cargo is – we are going to transport it.
